

# Portfolio Assignment T1A3

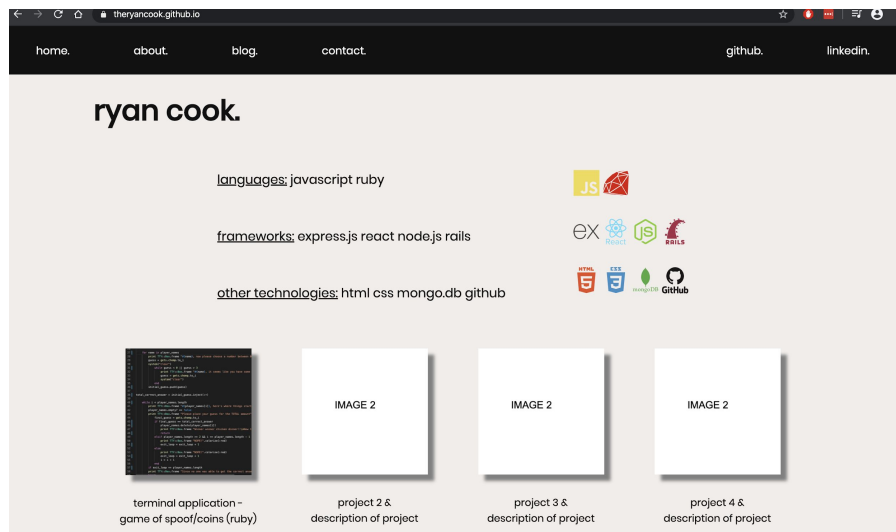

# Sitemap

- Pretty simple, like I imagined most of them were.

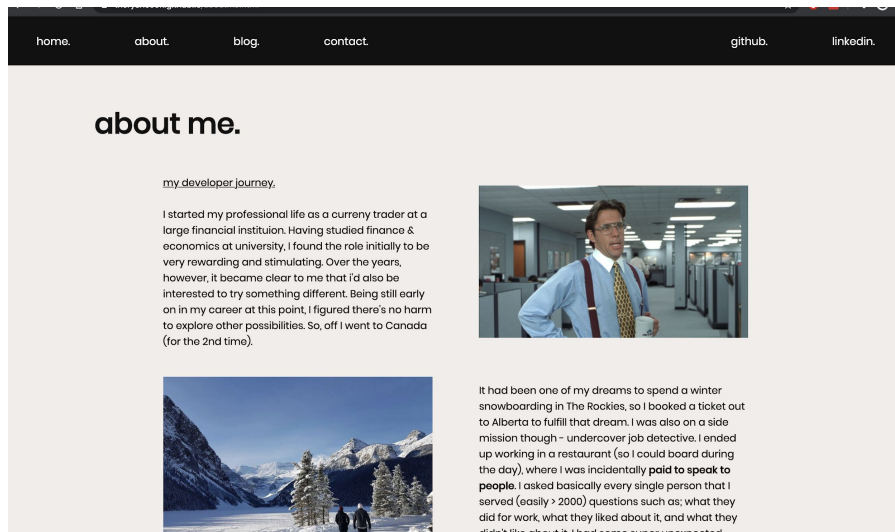

# Website & Features - Home Page

- I personally really like simple block colours, so I went for minimalist style
- Wanted users to do the least clicks possible to get to what they want to do. That's why I have projects with links and links to my code
- Share a lot of information on main page for easy with the recruiters

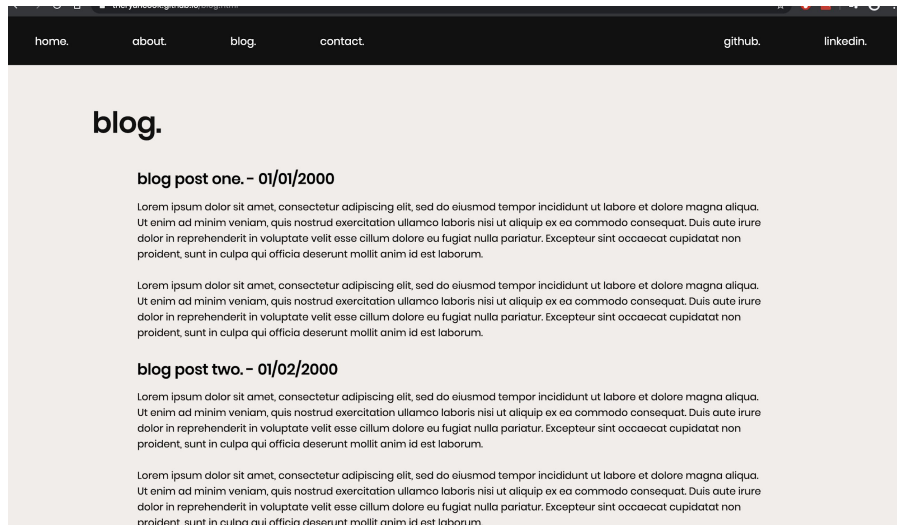

# Website & Features - About Me

- Included a lot of information on home page, so used this to tell the story of my journey to developer
- Tried to keep it interesting with some images.
- Lets recruiters know a little bit more about me

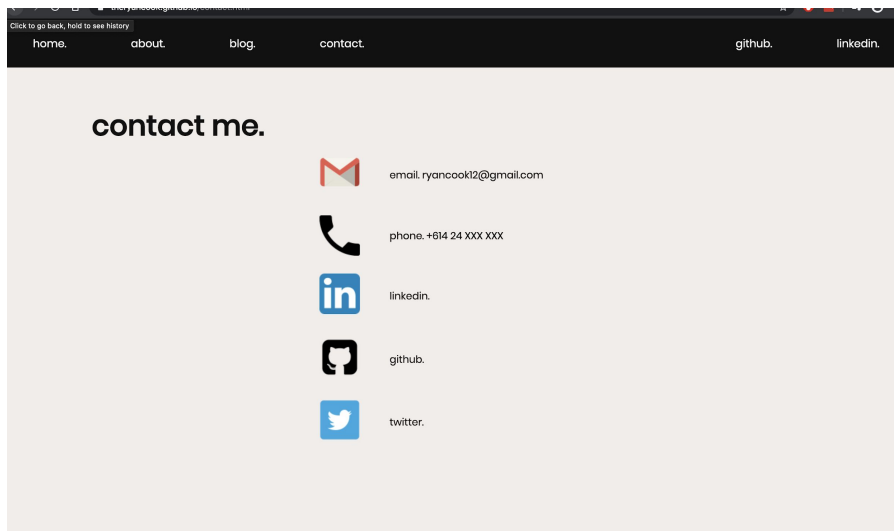

# Website & Features - Blog

- Blogging isn't really my thing, so i'll remove this page later
- Just used dummy text
- Styling has been consistent throughout

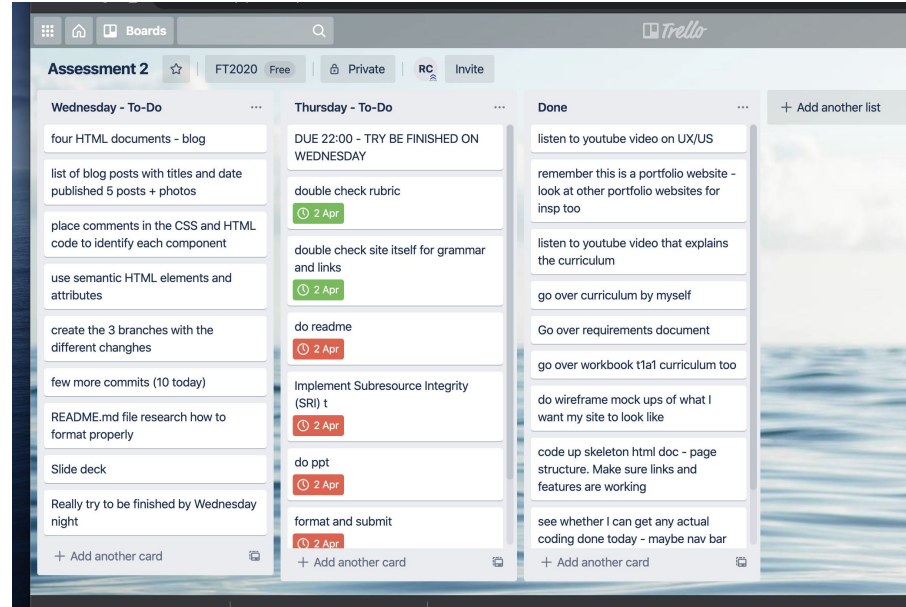

# Website & Features - Contact Me

- All clickable links
- Again, making it all very simple if people were to want to get in touch

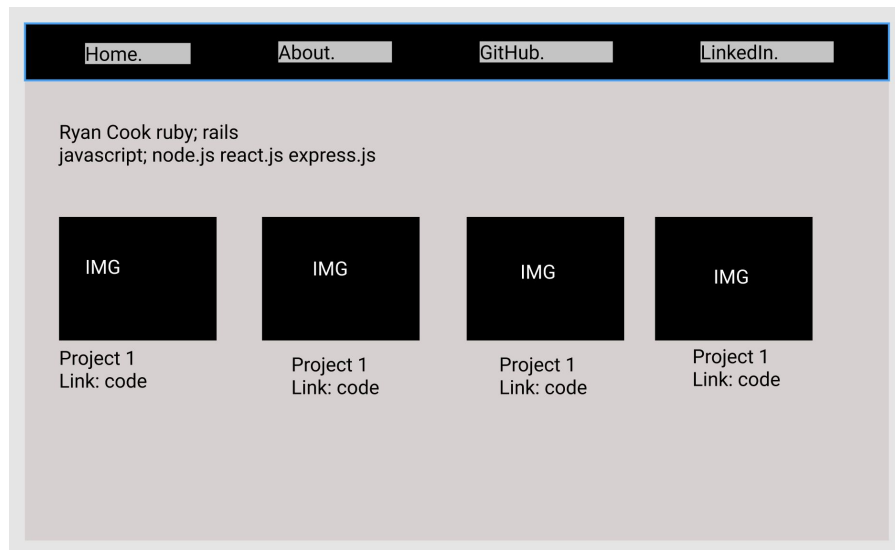

# Project Planning

- Used a Trello board from day 1 to plan out each day
- Made a list of everything that needed to be done and slid it around as needed
- Tried to finish a day early, and in the end needed the extra day

# Wireframes

- As you can see, stuck pretty close to the early concept
- Had a decent idea of the colour scheme that I wanted to go for
- Kept the minimal clicks in mind

# Favourite Part

- Getting it hosted on GitHub
- I did have a couple of problems with Git, so I learnt a lot and was up until 9p on Wednesday but now i'm a pro
- First thing i've ever made and uploaded onto the internet so i'm pretty proud of that
